PARMA, EMILIA-ROMAGNA, ITALY

About Me

Cloud Software Developer & Backend Engineer | Azure & .NET Specialist

With 9+ years in the industry, I design and build cloud-native applications and distributed backends on Azure. My experience spans API development in C#, microservices architecture, infrastructure as code, and CI/CD—delivering scalable, secure, and observable systems for enterprise workloads.

Currently, I serve as an SRE at Würth-IT, engineering Azure-centric automation and reliable delivery for Dynamics 365, Power Platform, and Entra ID. I focus on code quality, testing strategies, performance optimization, and seamless integration with cloud services.

Key Competencies:

- **Cloud-Native & Distributed Systems:** Designing resilient microservices and APIs, multi-environment deployments, and enterprise integrations across Dynamics 365, Power Platform, and Entra ID.
- **Backend Engineering:** .NET and Blazor for robust internal tools and customer applications; pragmatic use of software design principles and patterns.
- **Infrastructure as Code & CI/CD:** Bicep and YAML (GitHub Actions/Azure DevOps) to declaratively provision, validate, and ship software with repeatability and governance.
- **Reliability, Testing & Observability:** Load testing with Azure Load Testing/JMeter, resilience exercises with Chaos Mesh, and metrics/monitoring via Prometheus/Grafana to improve performance and stability.
- **Security Automation & Secrets Management:** Enterprise-scale Key Vault secret rotation, RBAC, and compliance-by-default guardrails embedded in delivery pipelines.
- **Governance at Scale:** Coordinating stakeholders and approvals in a single-tenant environment (85,000+ users, 500+ companies) to keep complex distributed systems compliant and operable.
- **Power Platform Administration:** Governing low-code environments and integrations at enterprise scale.

🎯 **My Mission:** Build cloud-native, reliable products that impact billions—simplifying complex distributed systems with strong API design and Domain-Driven Design principles to solve real-world problems.

Based in Parma, Italy. Let's connect to talk about the future of Cloud Engineering and .NET.

Experience

Site Reliability Engineer @ Würth IT Italy (Sep 2024 - Present)

📍 Parma, Emilia-Romagna, Italy

- Accelerated delivery across Würth-Phoenix's Microsoft cloud stack through reliable CI/CD, automation, and backend services.
- Designed and maintained Azure DevOps/GitHub Enterprise pipelines for CRM/ERP and Business Central workloads, enabling repeatable cloud-native deployments with quality gates.
- Developed production-grade .NET APIs and PowerShell automation to eliminate manual toil, standardize processes, and harden operations.
- Rolled out Bicep for reviewable, repeatable Infrastructure as Code across environments.
- Led admin/governance for tenants and repos (Azure, Entra ID, Business Central, Fabric, GitHub Enterprise), enforcing RBAC, DevSecOps guardrails, and compliance-by-default.
- Partnered with developers to embed testing strategies, shift-left security, and coding best practices—unblocking delivery while improving code quality and performance.

Presales Solutions Architect @ Agic Cloud (Jul 2023 - Jul 2024)

📍 Parma, Emilia Romagna, Italia

- Architected Azure landing zones and cloud-native application designs; defined migration plans focused on scalability, reliability, performance, security, and cost.
- Led technical presales: solutioned microservices/API integrations, produced estimations, and supported bids for complex multi-service Azure projects.
- Drove DevOps adoption with Bicep and YAML (GitHub Actions/Azure DevOps), standardizing IaC, build/test/deploy pipelines, and release practices across teams.
- Enabled Dynamics teams with secure integration patterns, using Key Vault and Managed Identity; improved delivery workflows and developer experience.
- Collaborated with engineering to troubleshoot distributed systems, resolve reliability issues, and streamline cloud operations.

Backend Team Leader & Cloud Developer @ Agic Cloud (Feb 2022 - Jul 2023)

 Parma, Emilia-Romagna, Italy

- Vetrya Cloud was acquired by the AGIC Technology group, becoming AGIC Cloud.
- Executed end-to-end performance and load testing using Azure Load Testing and JMeter.
- Built and managed multi-region projects with Microsoft Consulting, coordinating a fully remote team.
- Demonstrated AKS by building and deploying a custom three-layer containerized application with GitHub Actions, Bicep, Helm, Chaos Mesh, and Azure Load Testing; exposed metrics via Prometheus and Grafana.
- Led the Agic Cloud backend team, enabling growth and successful delivery.
- Contributed to open-source projects for both Agic Cloud and personally on GitHub.

Earlier roles

 [Full career history on LinkedIn](#)

Featured Projects

- [macel94](#) — This profile auto-updates from LinkedIn using the [EU DMA Data Portability API](#), a C# script, and GitHub Actions.

Education

- **Università degli Studi di Urbino 'Carlo Bo'** - Informatica Applicata(CS) (Sep 2013 - Jun 2020)
- **Liceo Scientifico A.Volta Riccione - Corso Sperimentale Brocca** - High School

Focus on advanced mathematics and natural sciences within an extended-hours experimental curriculum.

Languages

- **English** — Full professional proficiency
- **Italian** — Native or bilingual proficiency

Volunteering

- **Azure Consultant** · education (Dec 2021 - Present)
I helped the company with their onboarding on azure for nonprofit helping them obtain 3000\$ per year. I helped them choosing the right technology for their use case and building their website, setting up the db, custom domains, etc.
